

Sterilizing Water Maker

by electrolysis Technology

STERILIZING
DEODORIZING
CLEANING
ROMOVING PESTICIDE

Check point ✓

Sterilization/Deodorization

Fast and powerful sterilization and deodorization of more than 99%

Safety

Safe to human body
-electrolyzed water
for disinfection, deodorant

Technology

Base on R&D center and holds 7 patents and 4 utility models

Convenience to use

very convenient to use
by one-touch system

Economical

The longer the period of use, the higher the economic efficiency

Design

Refined design that fit anywhere in your life

5 Features You Can't Miss

Sterilizing / Deodorizing water maker by electrolyzation

Generates strong and safe electrolyzed water of sterilizing, deodorizing features.

Makes the electrolyzed water of mass quantity

Convenience in using of Micro Droplet Spraying(MDS), brought by semi-automatic spray head

Generates highly-efficient electrolyzed water only from tap water

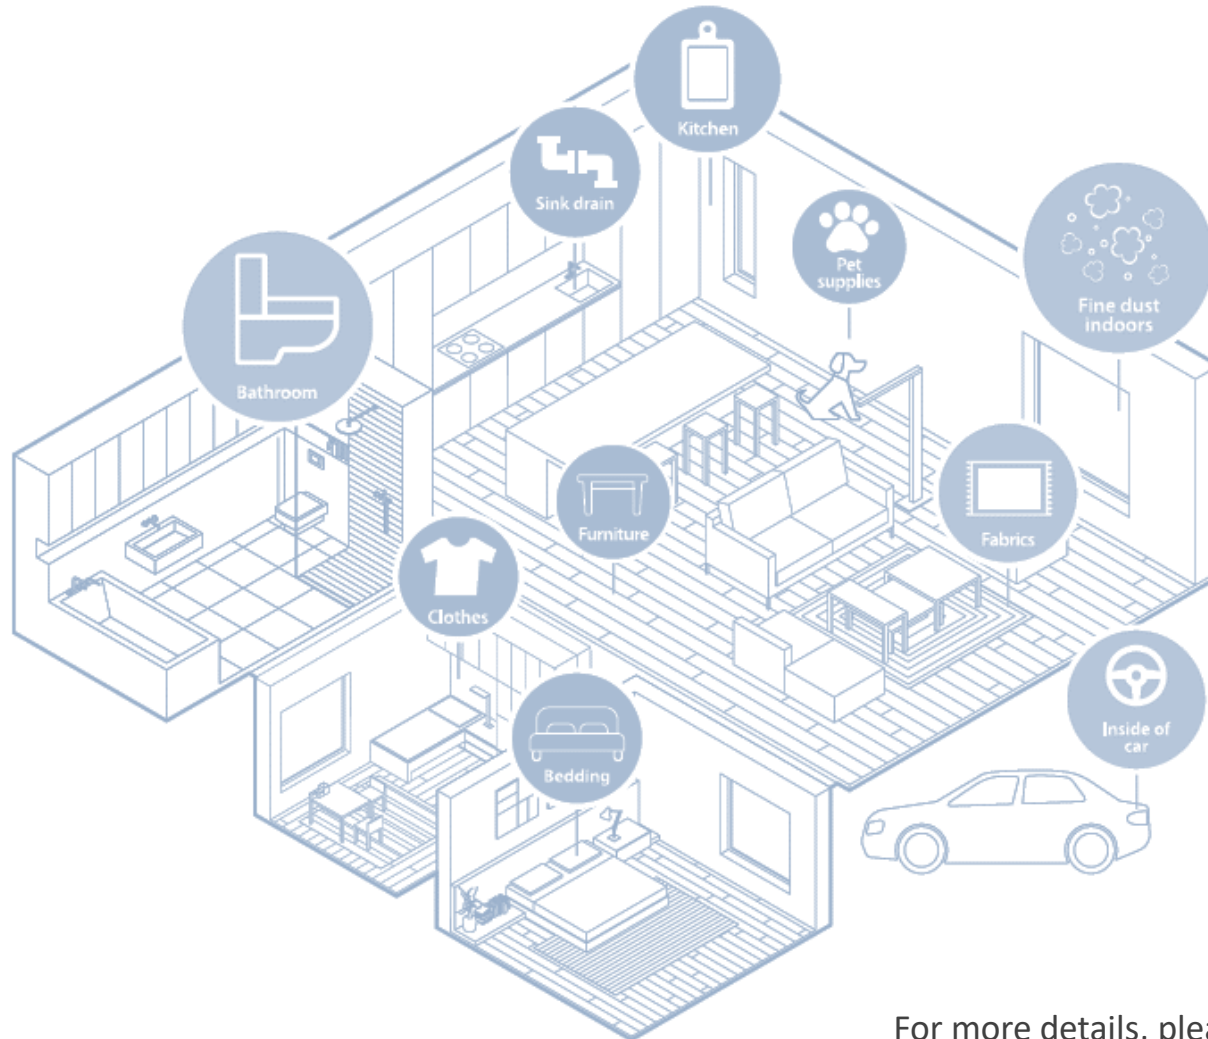

Completed safety tests on skin stimulation, eye irritation and oral toxicity

Applications

Electrolysis technology for sterilizing and deodorizing

For more details, please refer to the video below.

Applications

Electrolysis technology for sterilizing and deodorizing

Baby supplies

Baby supplies like silicone, rubber nipple. Pacifier, Dummy, baby teether

Sensitive surfaces, leather or fabric etc.

Fiber is a good environment for bacteria to live. Quilts, pillows, sofas, clothes and other frequently difficult to wash, please sterilize deep inside the deodorant.

Bathroom, toilets

Toilets, basins as well as toothbrushes, razors, hair combs and sterilization, you can easily deodorant.

Housekeeping

The wet kitchen is a hotbed of bacteria. Clean the sink, fridge, chopping board, kitchen knife and sink and fridge.

Pet supplies

Keep your pet's toys, rice bowls as well as cleansing odors and foul odors, clean your feet after walking.

You can uses 'Homeguard' in various living environment.

With no doubt, It's *Economical!*

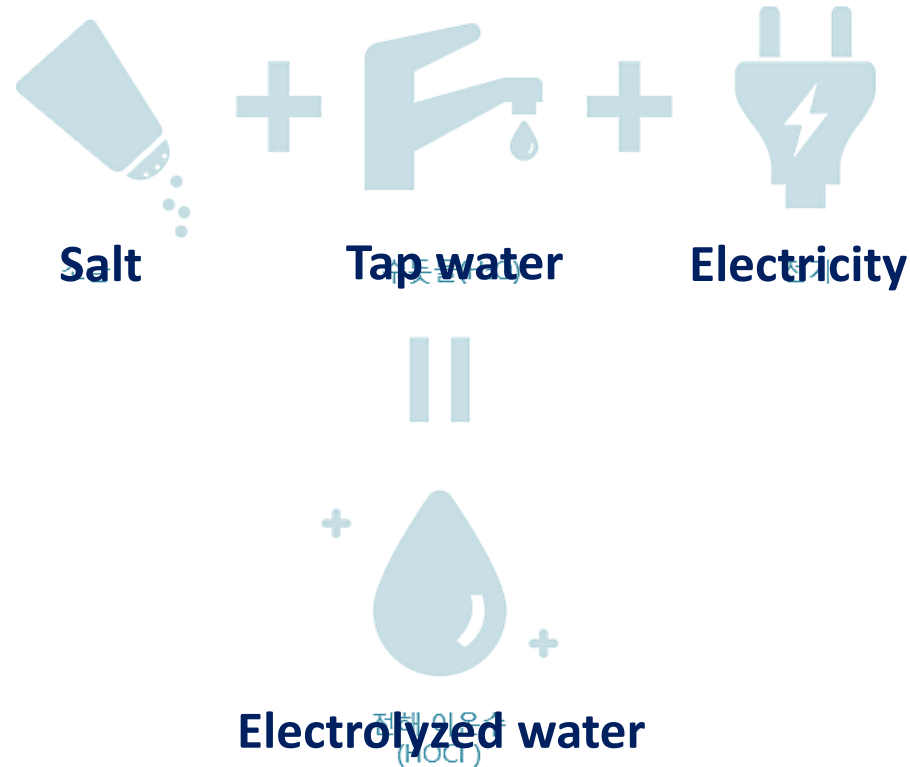

semi-permanently usable, can be used the more economically

	Other natural disinfectant products	Homeguard
		
Monthly expense	KRW 39,000	KRW 16,700
Annual expense	KRW 468,000	KRW 200,000
The 2 nd year	KRW 468,000	KRW 0
The 3 rd year	KRW 468,000	KRW 0

*base on average retail price

What is Electrolysis?

This is a kind of process to decompose a substance by electricity.

By this principle, electrolyzing water generates hydrogen and oxygen by such an electrolysis. You will see the bubbles rise in the middle of operation. Those are hydrogen and oxygen.

At the same time of generating both of them, oxidizing species, i.e. Hypochlorous Acid (HOCl), Hypochlorite Ion(OCl⁻) come up together, which have great oxidizing function to kill harmful virus, bacteria and decompose odors and pesticides.

Powerful Sterilization and Deodorization

Homeguard can sterilize and deodorize quickly and strongly with 99% sterilizing power of safe electrolytic ionized water.
